

## The Scrolling Screen for Ceiling

The Scrolling Screen can show multiple promotions or products and works great as a window display. The banner can be easily changed to create a new look or update sales information. Maximize your advertising space and generate interest with the Scrolling Screen.

This scrolling banner system provides almost twice the message area as a standard static banner stand. This means messages can be longer and more products or services can be displayed, attracting more attention to your organization. The human eye is drawn to motion, so why not use it to your advantage.
